Remote Access Tools Policy

1. Overview
Remote desktop software, also known as remote access tools, provide a way for computer users and support staff alike to share screens, access work computer systems from home, and vice versa. Examples of such software include LogMeIn, GoToMyPC, VNC (Virtual Network Computing), and Windows Remote Desktop (RDP). While these tools can save significant time and money by eliminating travel and enabling collaboration, they also provide a back door into the Rockdale County Government network that can be used for theft of, unauthorized access to, or destruction of assets. As a result, only approved, monitored, and properly controlled remote access tools may be used on Rockdale County Government computer systems.

2. Purpose
This policy defines the requirements for remote access tools used at Rockdale County Government.

3. Scope
This policy applies to all remote access where either end of the communication terminates at a Rockdale County Government computer asset.

4. Policy
All remote access tools used to communicate between Rockdale County Government assets and other systems must comply with the following policy requirements.

4.1 Remote Access Tools
Rockdale County Government provides mechanisms to collaborate between internal users, with external partners, and from non-Rockdale County Government systems. Proper configuration is important for secure use of these tools, mandatory configuration procedures are provided for each of the approved tools.

The approved remote access tools may change at any time, but the following requirements will be used for selecting approved products:

a) All remote access tools or systems that allow communication to Rockdale County Government resources from the Internet or external partner systems must require multi-factor authentication.

b) The authentication database source must be Active Directory or LDAP, and the authentication protocol must involve a challenge-response protocol that is not susceptible to replay attacks. The remote access tool must mutually authenticate both ends of the session.

c) Remote access tools must support the Rockdale County Government application layer proxy rather than direct connections through the perimeter firewall(s).

d) Remote access tools must support strong, end-to-end encryption of the remote access communication channels as specified in the Rockdale County Government network encryption protocols policy.

e) All Rockdale County Government antivirus, data loss prevention, and other security systems must not be disabled, interfered with, or circumvented in any way.
All remote access tools must be obtained through the standard Rockdale County Government procurement process, and the information technology group must approve the purchase.

5. Policy Compliance
5.1 Compliance Measurement
The Technology Services team will verify compliance to this policy through various methods, including but not limited to, periodic walk-thrus, video monitoring, business tool reports, internal and external audits, and feedback to the policy owner.
5.2 Exceptions
Any exception to the policy must be approved by Technology Services in advance.
5.3 Non-Compliance
An employee found to have violated this policy may be subject to disciplinary action, up to and including termination of employment.

6 Related Standards, Policies and Processes
None.

7 Definitions and Terms
The following definition and terms can be found in the SANS Glossary located at: https://www.sans.org/security-resources/glossary-of-terms/
- Application layer proxy - A computer that acts as an intermediary between a client machine and a server, caching information to save access time

Approved This 8th Day of May 2018.
